Yu Feng
Fall 2021

Recursive types

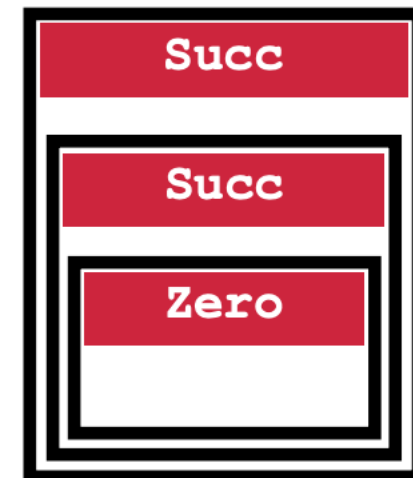

```
type nat = Zero | Succ of nat
```

What are values of nat?

One nat contains another!

WeChat: cstutorcs

nat = recursive type

plus: nat*nat -> nat

Base pattern | Zero
Inductive pattern | Succ of nat

```
type nat =
```

Assignment Project Exam Help

<https://tutorcs.com>
WeChat: cstutorcs

Base pattern | Zero -> n *Base expression*
Inductive pattern | Succ m' -> Succ (plus n m')

Inductive expression

List datatype

```
type int_list =  
  Nil  
| Cons of int * int_list
```

Assignment Project Exam Help

Lists are a derived type: built using elegant core!

<https://tutorcs.com>

WeChat: cstutorcs

1. Each-of
2. One-of
3. Recursive

:: is just a syntactic sugar for “Cons”

[] is a syntactic sugar for “Nil”

List function: length

```
let rec len l =  
  match l with  
    | Nil -> 0  
    | Cons(h,t) -> 1 + (len t)
```

Assignment Project Exam Help
<https://tutorcs.com>
WeChat: cstutorcs

Base pattern | *Base expression*
Inductive pattern | *Inductive expression*

List function: list_max

```
let rec list_max l =  
  match l with  
    | Nil -> 0  
    | Cons(h, t) -> max h (list_max t)
```

Base pattern | Nil *Base expression* -> 0
Inductive pattern | Cons(h, t) *Inductive expression* -> max h (list_max t)

Assignment Project Exam Help
<https://tutorcs.com>
WeChat: cstutorcs

```
let max x y = if x > y then x else y;;
```

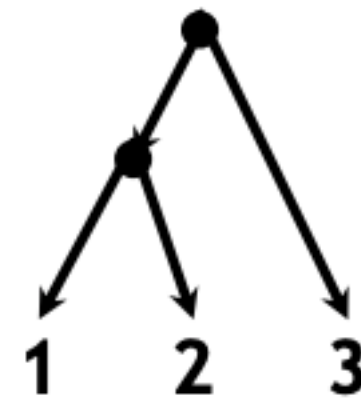

Representing Trees

```
type tree =  
  Leaf of int  
| Node of tree*tree
```

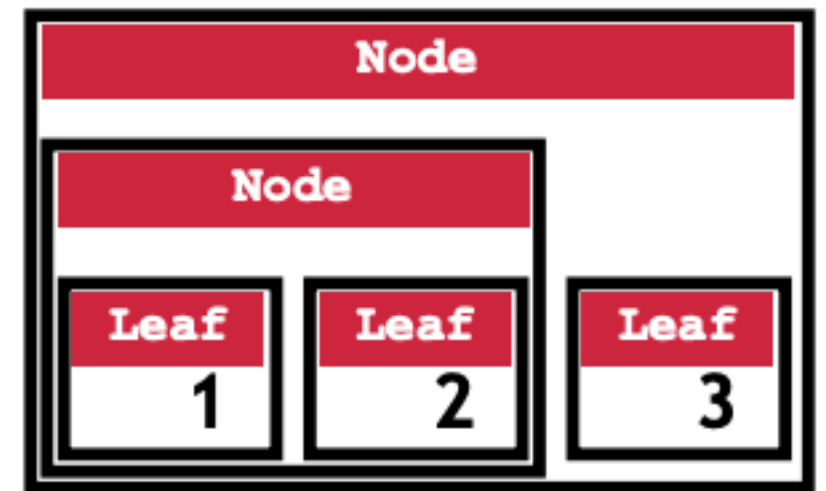

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

Node(Node(Leaf 1, Leaf 2), Leaf 3)

sum_leaf: tree -> int

```
type tree =  
  Leaf of int  
| Node of tree*tree
```

Assignment Project Exam Help

```
let rec sum_leaf t =  
  match t with  
  | Leaf n -> n  
  | Node(t1,t2) -> (sum_leaf t1)  
                    +(sum_leaf t2)
```

<https://tutorcs.com>

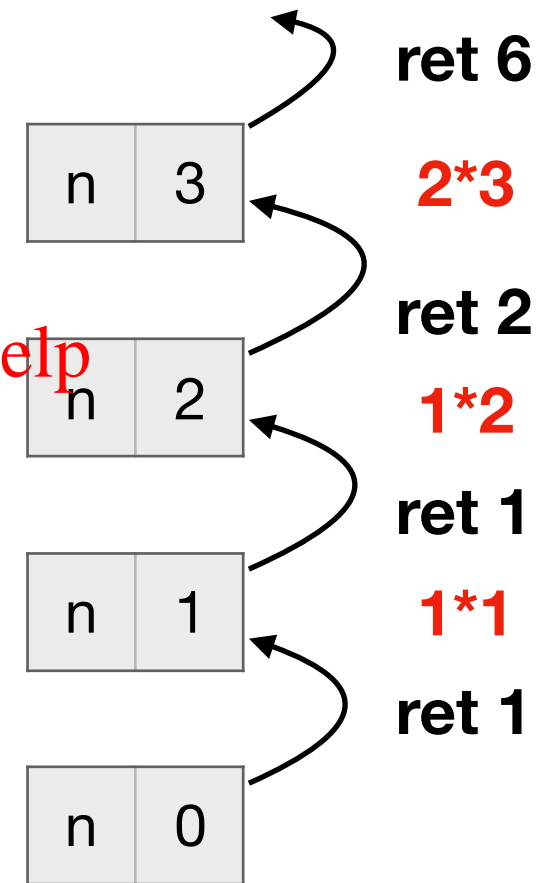

WeChat: cstutorcs

Factorial: $\text{int} \rightarrow \text{int}$

```
let rec fact n =  
  if n <= 0  
  then 1  
  else n * fact (n-1);;  
fact 3;;
```

Assignment Project Exam Help
<https://tutorcs.com>
WeChat: cstutorcs

How does it execute?

Tail recursion

Tail recursion

- Recursion where all recursive calls are immediately followed by a return

Assignment Project Exam Help

<https://tutorcs.com>

- In other words: no allowed to do anything between recursive call and return

WeChat: cstutorcs

Tail recursive Factorial

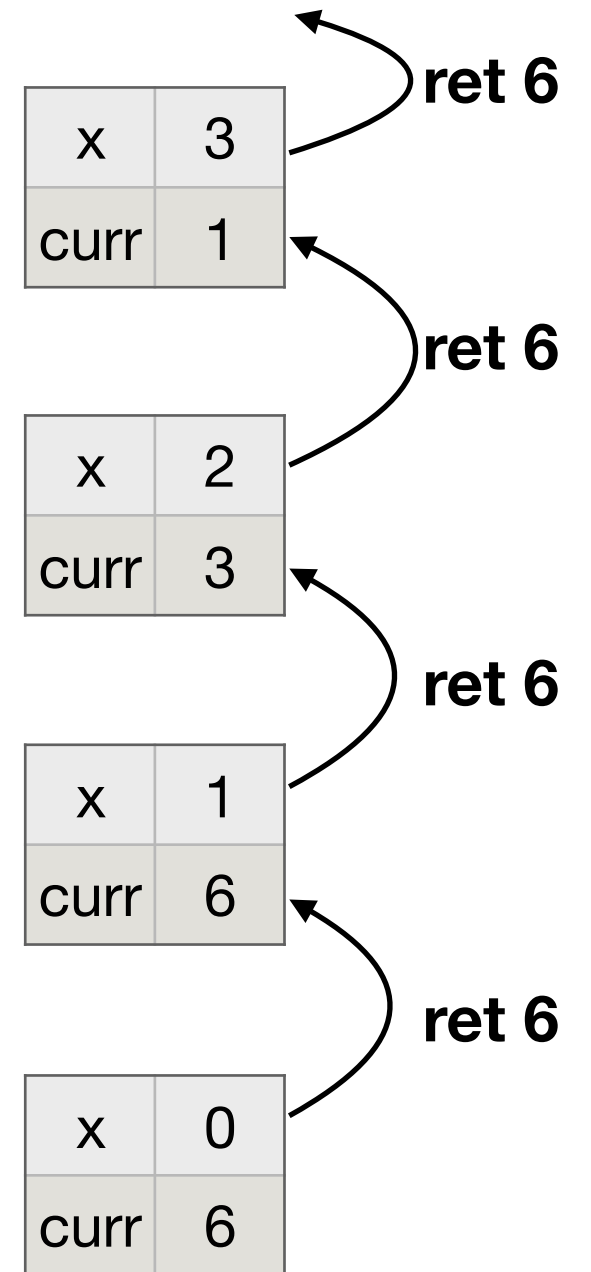

```
let fact x =  
  let rec helper x curr =  
    if x <= 0  
    then curr  
    else helper (x - 1) (x * curr)  
  in  
    helper x 1;;  
fact 3;;
```

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

How does it execute?

Tail recursion

Tail recursion

- Recursion where all recursive calls are immediately followed by a return

Assignment Project Exam Help

<https://tutorcs.com>

- In other words: no allowed to do anything between recursive call and return

WeChat: cstutorcs

Why do we care about tail recursion?

- Tail recursion can be optimized into a simple loop

Compiler optimization

```
let fact x =  
  let rec helper x curr =  
    if x <= 0  
    then curr  
    else helper (x - 1) (x * curr)  
  in  
    helper x 1;;
```

```
fact(x) {  
  curr := 1;  
  while (1) {  
    if (x <= 0)  
    then { return curr }  
    else { x := x - 1;  
          curr := (x * curr) } }  
}
```

Assignment Project Exam Help

WeChat: cstutorcs

Recursion

Loop

max function

```
let max x y = if x < y then y else x;;

(* return max element of list l *)
let list_max l =
  let rec l_max t =
    match l with
    [] -> 0
    | h::t -> max h (l_max t)
  in
    l_max t;;
```

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

A better max function

```
let max x y = if x < y then y else x;;

(* return max element of list l *)
let list_max2 l =
  let rec helper cur l =
    match l with
    [] -> cur
    | h::t -> helper (max cur h) t
  in
    helper 0 l;;
```

Tail recursion

concat function

```
(* concatenate all strings in a list *)
let concat l =
  let rec helper cur l =
    match l with
    | [] -> cur
    | h::t -> helper (cur ^ h) t
  in
  helper "" l;;
```

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

What is the pattern?

```
(* return max element of list l *)
let list_max2 l =
  let rec helper cur l =
    match l with
    | [] -> cur
    | h::t -> helper (max cur h) t
  in
  helper 0 l;;
```

<https://tutorcs.com>

WeChat: cstutorcs

The two functions are sharing the same template!

```
(* concatenate all strings in a list *)
let concat l =
  let rec helper cur l =
    match l with
    | [] -> cur
    | h::t -> helper (cur ^ h) t
  in
  helper "" l;;
```

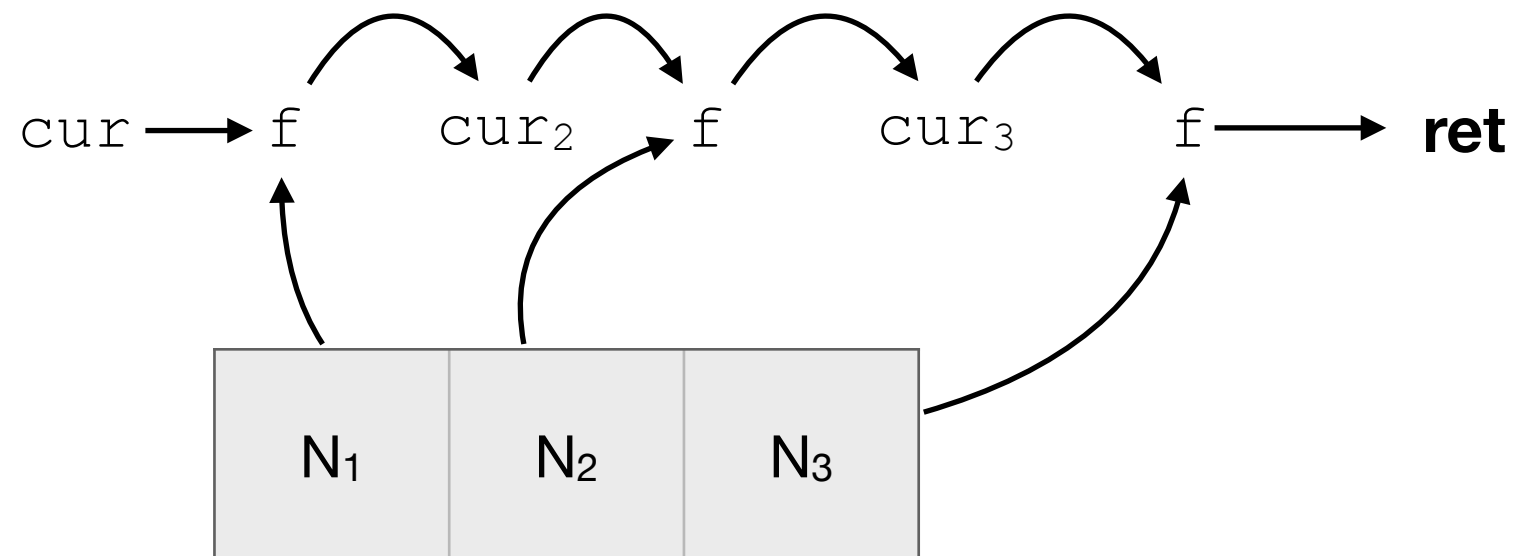

fold

```
(* fold, the coolest function! *)  
let rec fold f cur l =  
  match l with  
  [] -> cur  
  | h::t -> fold f (f cur h) t;;
```

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

fold: examples

```
let list_max = fold max 0 l;;
```

Assignment Project Exam Help

<https://tutorcs.com>

```
let concat = fold (^) "" l;;
```

WeChat: cstutorcs

map

```
# (* return the list containing f(e)
   for each element e of l *)
let rec map f l =
  match l with
  [] -> []
  | h::t -> (f h) :: (map f t) ;;
```

WeChat: cstutorcs

```
let incr x = x+1;;

let map_incr = map incr;;

map_incr [1;2;3];;
```

Composing functions

$$(f \circ g)(x) = f(g(x))$$

```
# (* return a function that given an argument x
  applies f2 to x and then applies f1 to the result *)
let compose f1 f2 = fun x => (f1 (f2 x)) ;;

(* another way of writing it *)
let compose f1 f2 x = f1 (f2 x) ;;
```

Higher-order functions

```
let map_incr_2 = compose map_incr map_incr;;  
map_incr_2 [1;2;3];;
```

Assignment Project Exam Help

```
let map_incr_3 = compose map_incr map_incr_2;;  
map_incr_3 [1;2;3];;
```

<https://tutorcs.com>

WeChat: cstutorcs

```
let map_incr_3_pos = compose pos_filer map_incr_3;;
```

**Instead of manipulating lists, we are
manipulating the list manipulators!**

Benefits of higher-order functions

Identify common computation patterns

- Iterate a function over a set, list, tree ...
[Assignment Project Exam Help](https://tutorcs.com)
- Accumulate some value over a collection
<https://tutorcs.com>
WeChat: cstutorcs

Pull out (factor) “common” code:

- Computation Patterns
- Re-use in many different situations
